

SPECIFICATION AMENDMENTS

Please replace the paragraph on page 10, lines 6-13 with the following amended paragraph:

AI
For each log entry that satisfies the selection criteria, the log monitor 26 retrieves the associated production (or informational) data from the source database 51 to generate updated records 57 for a destination database 58. The selection criteria utilized by the log monitor 26 is implemented as a rule set ~~58~~55. The rule set incorporates business logic for selecting the transactions affecting production (or informational) data of interest to a decision support or on-line analytical processing system. In addition, the log monitor 26 utilizes metadata 56 describing the schema employed by the destination database 58.
